

Datonis BI is a browser based business intelligence platform that enables plant personnel to perform self-service analytics and visualization of manufacturing KPIs that matter.

MANAGEMENT

OPERATIONS

IT

Modules

BROWSER BASED BI

Get started with insights from data right from a browser with no complex installs or set-up

DIY CHARTS & DASHBOARDS

Utilize a rich set of out-of-the box charting and visualization widgets to rapidly build insights

SLICE & DICE

Leverage grouping, filtering and aggregation capabilities to build a better understanding of data

SQL ENGINE

Go native with a built-in SQL Engine to build complex queries if the built-in analytics widgets prove insufficient

STANDARD DATA MODELS

Get pre-built data models for productivity, quality, maintenance and energy & utilities analytics

EXTERNAL DATA MODELS

Connect Datonis BI to external data sources to gain insights across dimensions

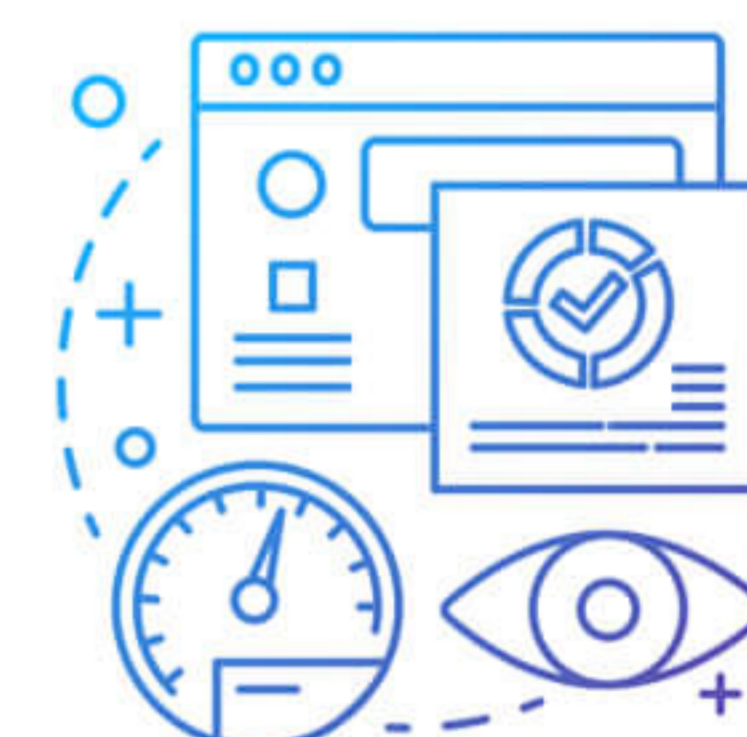

What is Datonis BI and what can it do?

- Datonis BI is a cloud based Business Intelligence tool that is a part of the Datonis IIoT platform suite. It is powered by Apache Superset, an open-source BI web application.
- Datonis BI provides the ability to analyze and visualize data using a browser.
- It is integrated with Datonis Manufacturing Intelligence (MINT). MINT data models such as Productivity, Quality, CBM and Energy are available out-of-the box.
- It can integrate with external SQL data sources to act as the data exploration and visualization tool for all manufacturing operations data.

What are the key features of Datonis BI?

- Datonis BI comes with a set of pre-configured data sources from the Datonis ecosystem. It can integrate with external datasources using plugins.
- Datonis BI comes with a powerful query builder that supports column selection, filtering and grouping.
- Queries can be attached to an extensive set of widgets to create charts. Pre-built widgets include all common charting widgets. Custom widgets can be added using plugins.
- Charts can be assembled to create reusable dashboards to be shared across the organization.

Who can use Datonis BI?

- Datonis BI is a simple and lightweight BI tool aimed at business users.
- The learning curve is extremely short. Users can get started with data exploration in minutes.
- Some of the advanced capabilities require a working knowledge of SQL.
- Integrating third-party data sources requires some level of IT know-how.

How is Datonis BI priced?

- Datonis BI is priced based on the number of users that use the tool and by data volume.

How is Datonis BI deployed?

- Datonis BI is available, by default as a cloud hosted application.
- Datonis BI is also available in private cloud and fully on-premise hosted models. Altizon will deploy and manage these instances.
- Standard Datonis MINT data models are available out-of-the box if you have bought a license for Datonis MINT.
